

CYBERSECURITY CHECKLISTS

A quick self-assessment for teachers, administrators, IT staff, and students

Work through each section below and tick the box next to any practice your school, classroom, or personal accounts already follow. Any unticked item is a quick, low-cost way to reduce your risk. This checklist is a starting point, not a complete security audit.

Device and Network Safety

- ☐ School computers and devices have up-to-date antivirus or endpoint protection installed
 - ☐ Operating system, browsers, and apps are set to update automatically or are checked regularly.
 - ☐ The school Wi-fi network is password protected, and a separate guest network is used for visitors.
 - ☐ Personal devices (BYOD) connecting to the school network follow a basic minimum-security standard
 - ☐ Screens are locked automatically after a short period of inactivity on shared or staff computers.
-

Review this checklist at the start of every term. Security is everyone's responsibility — one careless click can affect the whole institution, and one alert person can stop an attack.
