

CYBERSECURITY CHECKLISTS

A quick self-assessment for teachers, administrators, IT staff, and students

Work through each section below and tick the box next to any practice your school, classroom, or personal accounts already follow. Any unticked item is a quick, low-cost way to reduce your risk. This checklist is a starting point, not a complete security audit.

Password and Account Security

- ☐ Every staff and student account uses a unique password that is not reused across other sites or services.
 - ☐ Passwords are at least 12 characters long, or a passphrase is used instead of a single word.
 - ☐ Multi-factor authentication (MFA) is turned on for email, learning management systems, and admin accounts
 - ☐ Shared or default passwords (e.g., on routers, projectors, shared logins) have been changed from factory settings.
 - ☐ A password manager is used or recommended, rather than writing passwords down or reusing them.
-

Review this checklist at the start of every term. Security is everyone's responsibility — one careless click can affect the whole institution, and one alert person can stop an attack.
