

CYBERSECURITY CHECKLISTS

A quick self-assessment for teachers, administrators, IT staff, and students

Work through each section below and tick the box next to any practice your school, classroom, or personal accounts already follow. Any unticked item is a quick, low-cost way to reduce your risk. This checklist is a starting point, not a complete security audit.

Phishing and Email Safety

- ☐ Staff and students are shown real examples of phishing emails at least once per term.
 - ☐ Everyone knows to check the sender's actual email address, not just the display name, before clicking links.
 - ☐ There is a simple, known way to report a suspicious email (e.g., a specific person or IT address).
 - ☐ Nobody is expected to send passwords, financial details, or sensitive student data by email on request
 - ☐ Links and attachments from unexpected or unfamiliar senders are verified before opening
-

Review this checklist at the start of every term. Security is everyone's responsibility — one careless click can affect the whole institution, and one alert person can stop an attack.
